ABOUT US

As the first metal casting foundry in the State of Qatar, Suhail Factory for Metal Castings was built in the city of Mesaieed in 2022. It has two facilities that adopt the advanced technology in two different methods of metal casting. The first facility is a state-of-the-art sand-casting foundry using European technology, while the second facility is an investment - casting that uses robots to ensure consistent quality.

This facility is capable to manufacture pipeline products and accessories like pipe fittings, universal couplings, Socket fittings, flanged adaptors, restrained adaptors, dismantling joints, clamps, valves, fire hydrants, etc. Suhail Metal Castings Factory regards quality as an essential and integral part of our business success. We are working with ISO 9001, ISO 14001, ISO 45001, BSI Kitemark symbols.

FACILITY GENERAL INFORMATION

WHO WE ARE

Suhail Factory for Metal Casting, is an advanced foundry which comprise of green sand molding lines and investment casting facility with robotic shelling system. Producing cast iron/steel/non-ferrous castings for engineering, automobile, oil and gas field.

WHAT WE DO

- The green sand-casting foundry at **SUHAIL METAL CASTINGS FACTORY**, metal is melted in either of three induction furnaces then molten metal is poured into sand molds that are formed using forming machines that mix sand materials, fill and press them onto patterns bearing the shape of the final product.
- On the other hand, at the Investment Casting Facility, the patterns are shaped using wax injection machines, then the patterns are assembled and moved to the robotic shelling system where the shells are automatically prepared before moving them to dewaxing then shell firing and finally to metal pouring area.

Covering an area of 22,500 m², SFMC is capable to produce up to 40,000 Tons/ Annum of :

- Engineering Castings
- Automobile Cast Parts
- Oil and Gas Castings

COUNTRIES OF EXPORTS

SELLING TO 5 CONTINENTS, INCLUDING AND NOT LIMITED TO:

- 📍 **QATAR**
- 📍 **USA**
- 📍 **OMAN**
- 📍 **KUWAIT**
- 📍 **EUROPE**
- 📍 **NORTH AND EAST OF AFRICA**

With its production methods and R&D studies using advanced technologies such as 3D Sand & Metal printing, SFMC is one of the few manufacturers in the world using such technologies, giving SFMC an edge over other metal casting foundries in the region.

VISION

To be a leading local manufacturer and dependable partner for our clients, offering engineered goods and solutions.

MISSION

Supporting Qatar's social and economic development.

- Improve local content by transferring technologies and developing human capital.
- Assist in the development of oil and gas, water, and other prospective industrial projects.

Proactively involved with our major stakeholders.

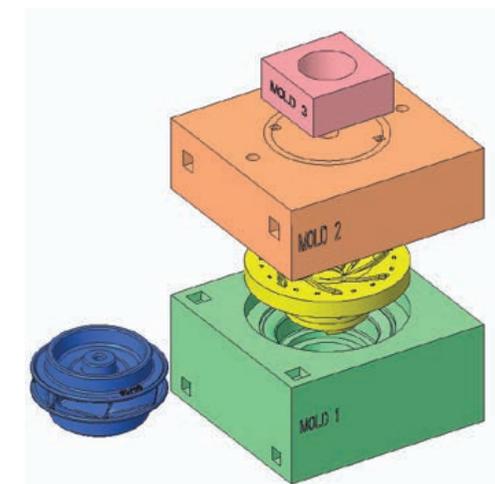

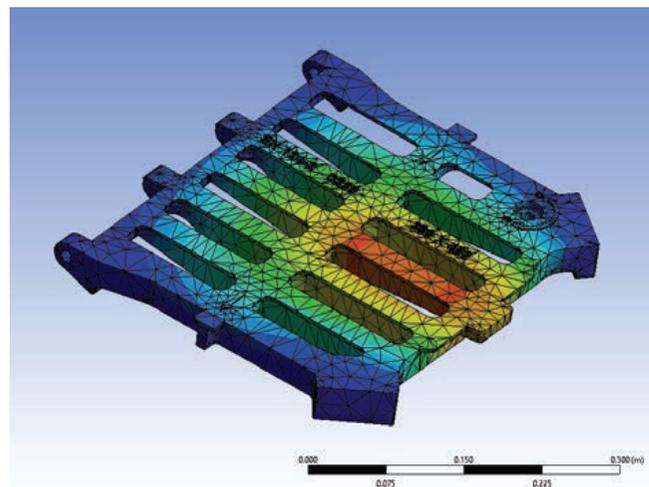

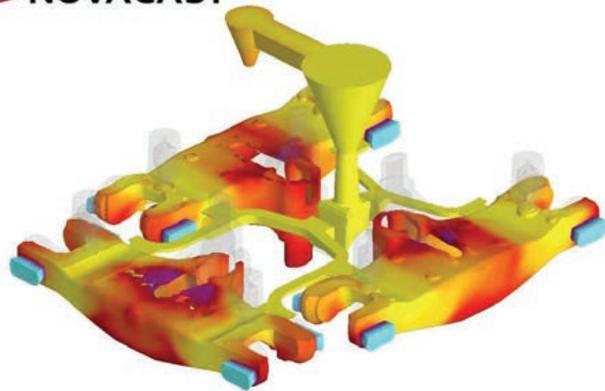

- Taking care of our people, our community, and the environment.
- Focus on operational excellence in engineered product manufacture.

ENGINEERING CAPABILITIES

- Research and development.
- 3D Modeling (Solidworks, Creo).
- Design analysis and optimization (ANSYS)
- Reverse Engineering (3D scanning-FARO).
- Prototype (3D Voxeljet Sand printing)
- Casting Solidification Simulation (Nova Cast)
- Patterns and Tool making (Master CAM, CNC Router, CNC Machining).
- Dimensional Analysis. (CMM, FARO)
- Metal and plastic 3D printing machines (MAPTEC)

 NOVACAST

MANUFACTURING CAPABILITIES

1. Green Sand Foundry

- Sand plant. (DISA)
- Automatic DISA Flex Machine (60 molds / hour)
- Two DISA ARPA 1300 Jolt Squeeze machines (30 molds /hour)
- DISA shot blasting machine.

- **OMEGA core shooters**

- Three Continuous mixer 3 tons / hour capacity.
- Three Machines with Shot weight ranging from 12 to 100 kg.

CAPABILITIES

- **Induction Melting IFurnaces**
 - Three furnaces with 3 tons capacity.
 - Melt rate of 6 tons / hour
- **Two Automatic Metal pouring systems.**

- **Automatic coating line.**

- 55 parts / hour
- Phosphating
- Prime coating
- Top coating

2. Investment casting

- Investment plant capacity 80 Tons / month.
- Automatic Robotic Shelling System.
 - Capacity - 200 Shells per day.
- Five Wax Injection machines.
- Dewaxing Machine.
- Three Melting Furnaces.
- Firing Furnaces.
- Heat Treatment Plant.

CAPABILITIES

- Advanced sand testing Laboratory.
- Metallurgical testing laboratory (Thermal Analysis, Spectrographic Analysis and Metallographic analysis with image Analyzer).

• Mechanical Testing Laboratory

- UTM,
- Hardness testing and
- Manhole cover Load Testing

CERTIFICATIONS

MATERIAL SELECTION

Suhail metal casting manufacture a range of high-performance cast-iron products including manhole covers/gully tops and DI Pipe Fittings. We recognize the need to provide a material that is capable of combating the wear characteristics inherent with the increasing amount of vehicular traffic on our roads today.

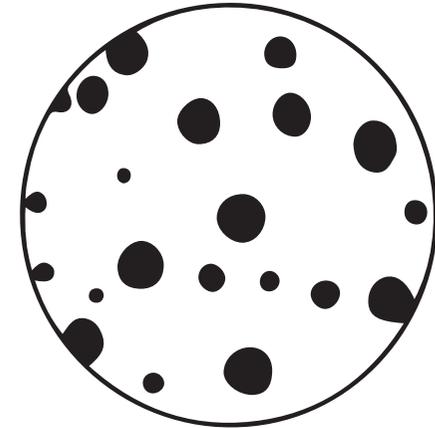

THE DIFFERENCE BETWEEN DUCTILE AND GREY IRON

The addition of magnesium at the molten stage transforms the flakes of graphite, which are common with the grey iron casting process, into spheroidal or nodular form. The spheroidal structure provides a higher tensile strength as well as a higher 'Strength to weight' ratio when compared with the properties inherent with grey.

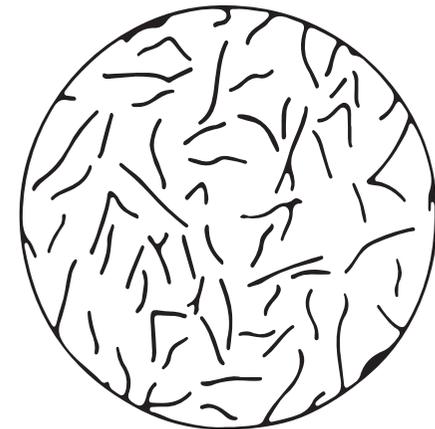

THE ADVANTAGE OF DUCTILE IRON

Ductile iron used for pipe fittings and accessories in which graphite is present primarily in Spheroid form. The addition of magnesium at the molten stage which transforms the flake graphite into spheroidal graphite. The Spheroidal structure provides a higher tensile strength as well as a higher 'Strength to weight' ration when compared with the properties inherent with grey. Other excellent properties such as anti-high compression, anti-oxidation, anti-corrosion etc. So, the ductile iron pipe fittings are widely used to such compressive pipes as water pipelines, sewage pipeline, etc.

Ductile Iron pipe fittings manufactured with ASTM A536: 65-45-1 grade

Ductile / Spheroidal Iron

Grey Cast Iron

PRODUCT AT A GLANCE

DI PIPE FITTINGS & ACCESSORIES

This Technical profile describes about ductile iron pipe fittings accessories and their joints for the pipeline or sewage application.

To convey water line application.

To convey sewage application.

TECHNICAL DESCRIPTION

Pipe fittings are used to join pipes together to transfer the water in the pipelines with pressure or without pressure. Fittings are manufactured within all required specification and all our well-established foundry quality standards and delivered as per customer requirements.

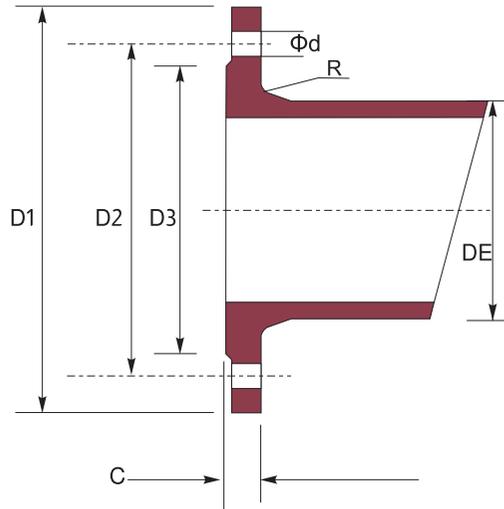

It is applicable to pipe fittings manufactured with socket type and flanged type fittings.

Process control activities such as metallurgical control, measuring dimensions and tolerances, checking mechanical properties, material leak tightness test for water pipeline application and sewage application shall be carried out on all fitting according to specifications before the application of their external and internal coatings.

MARKINGS

All fittings will be durably and legible marked the following indications

- Manufacturer's name or trademark
- The identification of the year of manufacturing
- Identification mark for ductile
- The PN rating of fittings where applicable
- The reference of international standard

GENERAL SPECIFICATIONS FOR ISO / EN PIPE FITTINGS DUCTILE IRON:

FOR PORTABLE WATER

ISO 2531: Ductile iron pipes, fittings, accessories and their joints for water applications

EN 545: Ductile iron pipes, fittings, accessories and their joints for water pipelines

ISO 4179: Ductile iron pipes for pressure and non-pressure pipelines - cement mortar lining

ISO 7005-2: Metallic flanges - Part 2: Cast iron flanges

EN 1092-2: Flanges and their joints, Circular flanges for pipes, valves, fittings and accessories

ISO 8179-2: Ductile iron pipes - External zinc-based coating

EN 14901: Epoxy coating (heavy duty) of ductile iron fittings and accessories

EN 15655: Internal polyurethane lining for pipes and fittings

ISO 4633: Joint rings for water supply, draining and sewerage pipelines

ISO 8180: Ductile iron pipes - Polyethylene sleeving

FOR SEWORAGE APPLICATION

EN598: Ductile iron pipes, fittings, accessories and their joints for sewerage applications

ISO 7186 Ductile iron product for Sewerage Application

ISO 4633: Joint rings for water supply, drainage and sewerage pipelines

LINING AND COATING FOR DUCTILE IRON FITTINGS:

External Coating Options	Internal Coating Options:
Zinc + Bitumen painting	Cement mortar lining
liquid epoxy resin painting	liquid epoxy resin painting
Fusion Bonded Epoxy lining (FBE)	Fusion Bonded Epoxy lining (FBE)
	Polyethylene sleeving (applied on site)
According to customers' requirements	According to customers' requirements
Thickness according to standard and customers' requirements.	

PRODUCT CLASS(LOAD):

MANHOLE COVERS AND GULLY TOPS: EN 124-1/2

SURFACE BOX/VALVE BOXES: BS 5834, PART 2/3, GRADE A,B,C

CHANNEL GRATES: EN 1433

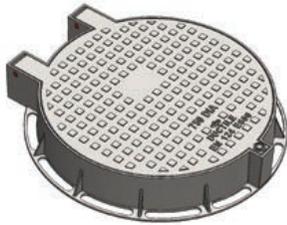

CLASS	LOAD BEARING REQUIRED	APPLICATION IN APPROPRIATES AREAS
A 15	15 KN (3400 lbf)	FOR USE IN PEDESTRIAN AREA 
B 125	125 KN (28200 lbf)	FOR USE IN FOOTWAYS, PEDSTRIAN AREAS AND CAR PARKS 
C 250	250 KN (56300 lbf)	FOR USE IN KERBSIDE CHANNELS OF ROADS AND CAR PARKS. 
D 400	400 KN (90000 lbf)	FOR USE IN CARRIAGEWAYS, HARD SHOULDERS AND PARKING AREAS. 
E 600	600 KN (134900 lbf)	FOR USE IN HIGH WHEEL LOADS AREAS LIKE DOCKS AND AIRCRAFT PAVEMENT. 
F 900	900 KN (202400 lbf)	FOR USE IN VERY HIGH WHEEL LOADS AREAS AIRCRAFT PAVEMENTS. 

PRODUCT AT A GLANCE

SURFACE PREPARATION AND PROTECTIVE COATING:

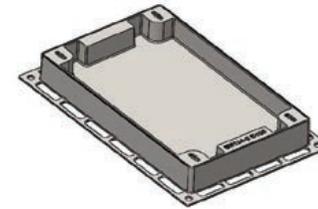

Manhole covers and gully tops are blast cleaned(EN ISO 8503) and coated with epoxy primer and black solvent free epoxy paint finish with minimum DFT of $300\mu\text{m}$ / $200\mu\text{m}$ (based on the purpose of use).
